

3-Axis Vibration Technology
Innovation by asyril

Ward Automation is a leading manufacturer of world-class bespoke automation solutions for the medical device, pharmaceutical and high-end manufacturing industries. Based in Ireland, they are renowned for delivering innovative, high quality automation equipment and robotic machine solutions for multinational customers all around the world.

Integrate Products

2 Flexible Feeding Systems Asycube 240

SUCCESS STORY

asyril Experts in Flexible Feeding Systems

Enhanced security and flexibility to give the medical device industry a financial advantage.

Ward Automation uses cobots and Asycubes to offer their clients a safe and financially interesting assembly solution.

The Challenge

- ▶ Guarantee the safety of production line operators.
- ▶ Meet the specific requirements of each individual client.
- ▶ Develop innovative automation solutions that allow clients to future-proof their high-cost investments.

The Solution

- ▶ Ward Automation uses collaborative robots, or “cobots”, because they are known for their capacity of working safely alongside operators in a factory environment. The **dual-arm ABB YUMI cobot**, in combination with the **Asycube 240 flexible feeding system**, ensures a fast and accurate assembly of medical device components, whilst the operator can safely continue to place the components in the flexible feeders.
- ▶ The Asycubes can be fitted with different platforms to ensure high-quality handling of any type of component. Furthermore, the changeover can be executed swiftly and without any tools. **This flexibility allows Ward Automation to accommodate their client’s specific needs.**
- ▶ The cobot and Asycubes can be easily re-programmed for new applications and future developments. Their capacity to evolve over time, together with their flexibility for a fast and easy production changeover, **offer clients a significant return on investment.**
